PROFESSIONAL SUMMARY

Self-taught AI-powered web developer specialising in building intelligent, production-ready applications using JavaScript, the Claude API, and modern serverless infrastructure. Proven track record of independently designing and shipping six full-stack projects — from embeddable chat widgets to multi-model AI playgrounds — entirely without frameworks where appropriate. Available for remote freelance engagements worldwide, with a focus on AI integration, frontend engineering, and rapid product delivery.

PROJECTS

ClarifAI — Conversational AI Assistant

[clarifai.vercel.app](#)

Personal Project · HTML, CSS, Vanilla JavaScript, Claude API · Vercel

- ▶ Built a fully functional conversational AI assistant from scratch using vanilla JavaScript and the Claude API, delivering a responsive chat experience with zero framework dependencies.
- ▶ Implemented multi-turn context management to maintain coherent conversation history across extended sessions, replicating core behaviour of commercial chat products.
- ▶ Engineered real-time streaming responses to progressively render Claude's output token-by-token, significantly improving perceived performance and user experience.
- ▶ Designed and integrated a system prompt editor enabling non-technical users to customise assistant behaviour, alongside a live token counter for transparency and cost awareness.
- ▶ Deployed and maintained the application on Vercel with continuous delivery from GitHub.

PromptCraft — Multi-Model AI Playground

[promptcraft-phi.vercel.app](#)

Personal Project · Vanilla JavaScript, Claude API, OpenAI API · Vercel

- ▶ Developed a side-by-side prompt testing tool that fires user prompts at Claude and GPT simultaneously, enabling direct qualitative comparison of model outputs in real time.
- ▶ Implemented parallel streaming across both APIs concurrently, ensuring neither response blocks the other and delivering a fluid dual-pane rendering experience.
- ▶ Built a persistent prompt library using localStorage, allowing users to save, label, and reload frequently used prompts without requiring a backend or user accounts.
- ▶ Added one-click JSON export of prompt-response pairs, supporting reproducible prompt engineering workflows and research documentation.

PageForge — AI Landing Page Generator

pageforge-eight.vercel.app

Personal Project · Node.js, Serverless Functions, Claude API, Tailwind CSS · Vercel

- ▶ Architected an end-to-end AI product that accepts a plain-language product description and generates a complete, styled, production-ready HTML landing page within seconds.
- ▶ Engineered Node.js serverless functions on Vercel to handle Claude API requests server-side, keeping API credentials secure and abstracting backend complexity from the client.
- ▶ Designed structured prompt templates instructing Claude to produce semantically correct HTML with Tailwind CSS utility classes, ensuring consistent and visually polished output.
- ▶ Delivered a tool capable of reducing landing page prototyping time from hours to under one minute for non-technical founders and marketers.

ChatEmbed — Lightweight Embeddable Chat Widget

chat-embed-eight.vercel.app

Personal Project · Vanilla JavaScript, Claude API, IIFE Pattern · Vercel

- ▶ Engineered a self-contained, Claude-powered chat widget of approximately 5 kb that any website owner can activate by inserting a single `<script>` tag — no build tools or dependencies required.
- ▶ Architected the widget as an Immediately Invoked Function Expression (IIFE) with programmatically injected CSS, ensuring full style isolation and zero conflicts with host-page stylesheets.
- ▶ Implemented configuration via HTML data attributes, enabling non-developers to customise widget behaviour, appearance, and assistant persona directly in markup without touching JavaScript.
- ▶ Optimised bundle footprint to remain under 5 kb, prioritising load performance and suitability for embedding on resource-constrained or third-party pages.

AutoCV — AI-Powered CV Builder

auto-cv-three.vercel.app

Personal Project · JavaScript, Claude API, HTML/CSS · Vercel

- ▶ Built an AI CV builder that transforms unstructured, freeform experience text into polished, ATS-optimised résumés using Claude as the structuring and copywriting engine.
- ▶ Designed and implemented four distinct CV templates and four adjustable tones (e.g. professional, creative, concise, executive), giving users fine-grained control over presentation.
- ▶ Developed a refine mode allowing users to iteratively improve specific sections through natural language instructions, enabling a guided editing workflow powered by conversational AI.
- ▶ Integrated client-side PDF download functionality, delivering a complete end-to-end product from raw input to downloadable document with no external dependencies.

DEVFOLIO_OS — Personal Portfolio Website

devfolio-os.vercel.app

Personal Project · HTML, CSS, Vanilla JavaScript · Vercel

- ▶ Designed and built a five-page personal portfolio entirely from scratch with zero frameworks, demonstrating command of core web platform APIs and hand-crafted CSS.
- ▶ Created a distinctive sci-fi terminal aesthetic with custom CSS animations and JavaScript-driven scroll reveal effects, producing a memorable and differentiated brand identity.
- ▶ Implemented a fully responsive layout across all five pages, ensuring consistent presentation and usability on devices ranging from mobile to widescreen desktop.

EDUCATION

Self-Directed Software Development

2023 — Present

Independent Study · Yaoundé, Cameroon

- ▶ Acquired full-stack and AI integration skills entirely through self-directed study, combining official API documentation, hands-on project building, and AI-assisted learning methodologies.
- ▶ Shipped six production-deployed web applications across frontend, serverless backend, and AI API domains, using each project as a structured learning milestone.
- ▶ Currently upskilling in Python, React and Next.js, and backend API development with FastAPI to broaden full-stack capability and expand available service offerings.

SKILLS

Languages

HTML/CSS — Expert JavaScript — Advanced
Python — Proficient Bash/Shell — Learning

Frameworks & Libraries

Vanilla JS / Web APIs Tailwind CSS
Node.js / Express React — Learning
FastAPI — Learning

AI & APIs

Claude API — Expert Prompt Engineering — Expert
OpenAI API — Advanced
LLM App Building — Advanced
RAG / Vector Databases — Proficient

Tools & Platforms
